

Model AR_005

1. Patient Details

Body Mass Index: 31

Age: 67

Approximate Skin Thickness: 3 mm

2. Axillary Regions Models

2.1 Right:

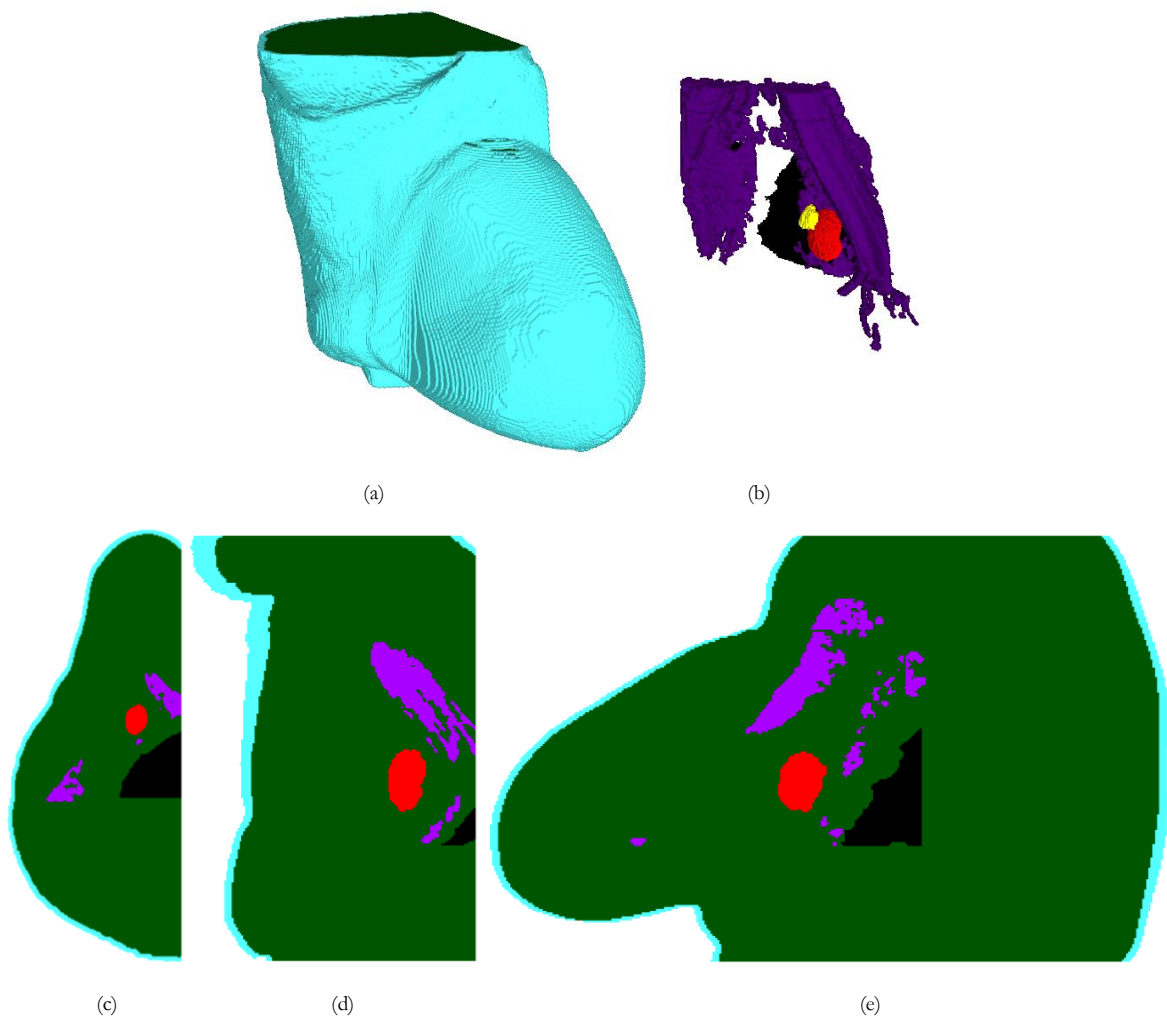

Figure 1. Right axillary region model in: (a) 3D with all tissues, (b) 3D without skin nor adipose tissue, (c) axial, (d) coronal, and (e) sagittal views. Blue represents the skin, green represents the adipose tissue, purple represents the muscle and remaining fibroglandular tissue, black represents the lung cavity, yellow represents the healthy Axillary Lymph Nodes (ALNs) and red represents the metastasised ALNs.

Available Files:

1. AR_005_R_skin (.mat/.raw/.stl)
2. AR_005_R_skin_filled (.stl)
3. AR_005_R_adipose (.mat/.raw/.stl)
4. AR_005_R_adipose_filled (.stl)
5. AR_005_R_lung (.mat/.raw/.stl)
6. AR_005_R_muscle (.mat/.raw/.stl)
7. AR_005_R_h_aln (.mat/.raw/.stl)
8. AR_005_R_m_aln (.mat/.raw/.stl)

9. AR_005_R_label_map (.mat/.raw)
10. AR_005_R_weight_map (.mat/.raw)

Grid Size: 217 x 443 x 169 (Axial x Coronal x Sagittal)

Voxel Size: 0.9965 x 0.9965 x 1 (Axial x Coronal x Sagittal)

Number of Healthy Lymph Nodes: 1

Number of Metastasised Lymph Nodes: 1

Volume Ratios:

Figure 2. Ratio between the volume of each tissue type and the total volume of: (a) the whole model and (b) restricted to the axillary region. The asterisk (*) means that other tissue types may have been included in the calculation, such as fibroglandular tissue. H means Healthy and M means Metastasised.

Figure 3. Ratio between the volume of each Axillary Lymph Node (ALN) and the total volume of ALNs. H means Healthy and M means Metastasised.

Dielectric properties considering MRI-intensity-based dielectric properties map:

Figure 4. Average relative permittivity of each tissue type at 5 GHz. The asterisk (*) means that other tissue types may have been included in the calculation, such as fibroglandular tissue. H means Healthy and M means Metastasised.

Figure 5. Average conductivity of each tissue type at 5 GHz. The asterisk (*) means that other tissue types may have been included in the calculation, such as fibroglandular tissue. H means Healthy and M means Metastasised.

2.2 Left:

Figure 6. Left axillary region model in: (a) 3D with all tissues, (b) 3D without skin nor adipose tissue, (c) axial, (d) coronal, and (e) sagittal views. Blue represents the skin, green represents the adipose tissue, purple represents the muscle and remaining fibroglandular tissue, black represents the lung cavity, and yellow represents the healthy Axillary Lymph Nodes (ALNs).

Grid Size: 217 x 443 x 138 (Axial x Coronal x Sagittal)

Voxel Size: 0.9965 x 0.9965 x 1 (Axial x Coronal x Sagittal)

Number of Healthy Lymph Nodes: 2

Number of Metastasised Lymph Nodes: 0

Volume Ratios:

Figure 7. Ratio between the volume of each tissue type and the total volume of: (a) the whole model and (b) restricted to the axillary region. The asterisk (*) means that other tissue types may have been included in the calculation, such as fibroglandular tissue. H means Healthy and M means Metastatised.

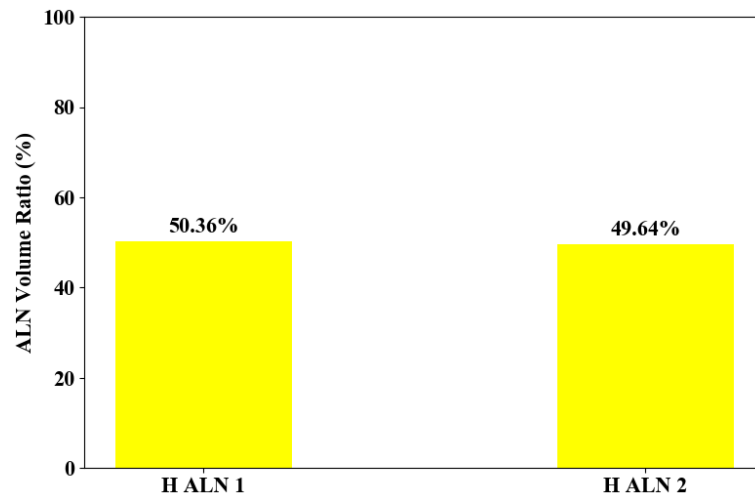

Figure 8. Ratio between the volume of each Axillary Lymph Node (ALN) and the total volume of ALNs. H means Healthy.

Dielectric properties considering MRI-intensity-based dielectric properties map:

Figure 9. Average relative permittivity of each tissue type at 5 GHz. The asterisk (*) means that other tissue types may have been included in the calculation, such as fibroglandular tissue. H means Healthy and M means Metastatised.

Figure 10. Average conductivity of each tissue type at 5 GHz. The asterisk (*) means that other tissue types may have been included in the calculation, such as fibroglandular tissue. H means Healthy and M means Metastatised.

3. Dielectric Properties:
